High Strength Bolting Techniques

Cost: \$185/person

December 6, 2016 - 1:00 – 5:00 p.m. (Broadway 1 & 2)

High strength bolting is a fundamental element in the construction of modern steel structures. A working knowledge of bolting design, fabrication, and installation techniques is essential during all aspects of construction process, including inspection. This course will benefit new and experienced professional seeking an increased understanding and awareness of bolted connections for structural steel systems. Participants will receive “hands-on” experience in achieving specified bolt tensions with bolts of varying conditions using a Skidmore-Wilhelm bolt tension calibrator.
